PROFESSIONAL PROFILE

Performance-driven **Senior Web Developer** with **5 years and 6 months** of validated expertise engineering robust backend systems, modular ERP frameworks, and high-velocity business applications. Highly specialized in the **PHP/Laravel** ecosystem and complex data architecture scaling. Expert at isolating infrastructure operational lag, demonstrated by a metrics-backed **95% database load reduction**—compressing raw query times from 40s to 2s across 15+ live transactional systems.

TECHNICAL CORE ECOSYSTEM

Backend Architecture	PHP (Core & Advanced), Laravel Framework, RESTful API Engineering, JWT Authentication Layer
Data & Performance	MySQL Relational DB, Redis Memory Cache, Advanced SQL Indexing, Schema Optimization
DevOps & Servers	VPS Management, Deployment Workflows, Cloudflare Security, DNS Mapping, SSL Management, Git
UI Engineering	JavaScript (ES6+), jQuery Engine, Bootstrap 5 UI, Semantics HTML5, Custom Layout CSS3
Integrations & Tools	Razorpay Gateway, PhonePe API, Shiprocket Logistics, Zoho Webhooks, Firebase, Postman Client

PROFESSIONAL HISTORY

Muviereck Technologies Pvt. Ltd. Jan 2023 – Present
Senior Web Developer Salem, TN

- Enterprise E-Commerce Scaling:** Architecting core backend operations for 15+ high-volume commercial ecosystems with automated inventory state synchronization.
- Database Performance Tuning:** Engineered complex query refactoring and table schema optimizations, securing a documented **95% speed up** from 40s to 2s processing times.
- Stateless Microservices:** Constructed protected distributed API structures backed by secure stateless JSON Web Tokens (JWT) for companion mobile client sync.
- Production Operations:** Directing complete system launches on enterprise standalone VPS configurations, implementing proxy rules, edge routing, and threat rules using Cloudflare firewall.
- Automation Engineering:** Established Background Task Automation pipelines deploying internal Redis Queues and automated systemic Cron Jobs for continuous operational execution.
- Technical Leadership:** Leading structural peer reviews, maintaining validation criteria, and mentoring junior engineers on clean-code patterns.

- **Full-Stack Development:** Programmed responsive dynamic applications utilizing custom Core PHP frameworks coupled with highly efficient normalized relational databases.
- **Transaction Systems:** Integrated logistics delivery flows through Shiprocket Webhooks alongside complex financial multi-split payment operations.
- **Business Dashboards:** Developed 5+ advanced administrative system panel variations, ensuring asynchronous UI components synced with central data structures.
- **Legacy Code Migration:** Refactored outdated database dependencies into optimized object-oriented layers, enhancing application response speeds across early business deployments.

STRATEGIC DELIVERABLES PORTFOLIO

- **Premium Jewellery E-Commerce Hubs:** Managed asset-heavy online storefront applications running optimized item matrix tables and multi-tier filter parameters.
- **Marine Logistics Job Portal:** Designed a failure-proof professional placement network with lightning-fast reactive filtering algorithms handling huge sets without deadlocks.
- **Asynchronous Evaluation Platforms:** Built real-time concurrency tracking models logging high-velocity examination metrics smoothly during peak concurrent traffic spikes.
- **Custom Enterprise ERP & CRM Software:** Formulated automated background CRON billing engines and custom multi-tenant tracking platforms configured with secure webhooks for real-time customer data updates.

KEY ARCHITECTURAL METHODOLOGIES

- **Software Architecture & Patterns:** Monolithic to Microservices System Migration, Object-Oriented Programming (OOP), SOLID Principles, MVC Architecture Patterns.
- **Enterprise Security Standards:** OWASP Top 10 Core Vulnerability Mitigation, Strict Input Validation Layers, Secure Token Handling, SQL Injection Defense Frameworks.
- **Agile Workflows & QA:** Scrum Operations, Version Control Workflows (Gitflow Branching Models), Continuous Deployment Concepts, Technical System Documentation.

SYSTEM DESIGN & ENGINEERING PARADIGMS

- **High-Availability Design:** Engineered robust backend frameworks using Redis distributed caching and caching layers to minimize heavy computational database overheads.
- **Performance Auditing:** Experienced in query execution path mapping utilizing database tools (such as EXPLAIN statements) to eliminate structural table scanning issues.
- **API Best Practices:** Enforcing strict error handling, comprehensive HTTP status mapping, clear JSON responses, and technical documentation via Postman environments.

EDUCATION

Muthayammal College of Engineering

2016 – 2020

Bachelor of Engineering (B.E.) — Electronics and Communication Engineering
